BOGRAMA AG PRESS RELEASE

Excellence in Die-Cutting at Drupa 2024

"next level die-cutting"

Unmatched in efficiency, flexibility and quality

Die-cutting, kiss-cutting, creasing, perforating and embossing - Made in Switzerland

For those interested in technological excellence, maximum efficiency, and outstanding quality in the field of die-cutting at Drupa 2024, there was no way around BOGRAMA.

Various die-cutting options impressively presented

At the Postpress Alliance joint stand in Hall 15, BOGRAMA demonstrated the limitless possibilities of its rotary die-cutting technology using a colorful and creative flyer production in 9-up mode. The original sample catalogue presented the variety of die-cutting solutions under the motto "everything that the die-cutting sheet can offer".

Modular production line for maximum flexibility

At the heart of the trade show presentation was a modular production line consisting of the following components:

- BSR 550 Servo Rotary Die-Cutter with Pallet Feeder
- SH 550 Die Grid Shredder
- STA 550 BK Stack Delivery
- Cross Conveyor with Banding Unit
- Robot from Universal Robots

With this innovative system, BOGRAMA offered practical solutions for the following challenges in print finishing:

- Flexibility of configuration options
- Integration of production processes
- Automation
- Reduction of labor costs
- Increase in output
- Increase in product quality

Quality, output, and process optimization in focus

The focus of trade visitors was particularly on the topics of quality, output, and optimization of production processes. Precisely these aspects were also the focus of the continuous further development of BOGRAMA's inline solutions, which aim to make its customers' productions more agile, flexible and future-proof.

Efficient suction technology from Nickel AG

The BOGRAMA system was perfectly complemented by the connection to the "ASSUGO" compact suction system from Nickel AG, which was a neighboring stand at the trade show. As a Drupa partner, Nickel AG ensured the efficient extraction of recyclable paper waste from both BOGRAMA and Wohlenberg.

Conclusion: Redefining excellence and efficiency

The ease and speed of operation of BOGRAMA systems, combined with minimal setup times, make production more agile, flexible, and sustainably reduce costs. Nick-free die-cutting sets the standard for the highest product quality. Inline stripping, shredding, and discharging of die-cut grids enables process-optimized production without manual intervention and means seamless, high-performance, and labor-saving further processing.

BOGRAMA: Tailor-made solutions for all printing sectors

Whether in the commercial, pharmaceutical, packaging, playing card, label or digital printing sectors - with BOGRAMA, you redefine top quality and efficiency.

Every printed matter deserves the best, and that's exactly what BOGRAMA delivers!
